SESSION 1: CONTAINMENT AND MITIGATION OF TOXIC MINE WASTE

Oxygen Transport and Pyrite Oxidation in Unsaturated Coal-Mine Spoil.
Weixing Guo, Charles A. Cravotta III ................................................................. 3

Pumped Co-Disposal of Black Coal Washery Wastes in Australia.
David J. Williams .................................................................................................. 15

Site Characterization and Containment/Remediation of Acid Mine Drainage at an Abandoned Mine Waste Dump.
Fred Djahanguiri, James Snodgrass, John Koerth ........................................... 23

SESSION 2: MINE HYDROLOGY

Physical Characteristics.
Jay W. Hawkins, Keith B.C. Brady, Scott Barnes, Arthur W. Rose ....................... 42

Geochemical Characteristics.
Keith B.C. Brady, Arthur W. Rose, Jay W. Hawkins, Michael Dimateo .................. 52

Mine Seepage Problems in Drift Mine Operations.
Clyde DeRossett, David E. Johnson, David B. Bradshaw ...................................... 63

Effects of Spoil Groundwater on Water-Quality in a Receiving Lake.
Douglas C. Turney, Kenneth B. Edwards, Walter E. Grube, Jr. ............................. 72
Ground- and Surface-Water Interactions Involving an Abandoned Underground Coal Mine in Pike County, Indiana.
Denver Harper, Greg A. Olyphant, Donald R. Sjogren ................................................................. 87

Modeling the Effects of Longwall Mining on the Ground Water System.
R.J. Matetic, J. Liu, D. Elsworth ............................................................................................................ 96

Groundwater Conditions Around a Coal-Combustion Residue Site in Southern Illinois.
Steven Esling, Merryn Fielding, Bradley Paul..................................................................................... 115

SESSION 3: MINE SUBSIDENCE AND DAMAGE MITIGATION

Use of Analog Ground Medium of Taylor-Schneebeli Type for Modeling of Multiparametric Deformations Arising in Mining-Influenced Areas.
Kazimierz Klosek ................................................................................................................................. 134

Releveling and Behavior of Strap Retrofitted Damaged Test Foundations Exposed to Mine Subsidence.
Gennaro G. Marino............................................................................................................................... 146

David Brook ......................................................................................................................................... 163

Repair of the Czar Shaft Sinkhole.
J. David Deatherage, Jack Starkey, Nils Gustavson............................................................................. 175

Monitoring of a House During Mining Subsidence.
G. Lin, E.C. Drumm, R.M. Bennett, L. Powell....................................................................................184

Using GIS and Numerical Modeling to Assess Subsidence Over Abandoned Mines.
SESSION 4: MINE-SLOPE STABILITY

Application and Analysis of Anchored Geosynthetic Systems for Stabilization of Abandoned Mine Land Slopes.
Stanley J. Vitton, M. Frank Whitman, Wendell Harris, Robert Y. Liang .......................................................... 256

Maximum Safe Slope Angles for Proposed Shiplock Slopes of Three Gorges Dam Site Based on Kinematic Analyses Performed on Major Discontinuities.
Jeong-gi Um, Pinnaduwa H.S.W. Kulatilake, Jianping Chen, Jianren Teng ......................................................... 267

Clyde R. Tant, Eric C. Drumm, Matthew Mauldon, Richard M. Berry ................................................................. 282

SESSION 5: ACID MINE DRAINAGE REMEDIATION

Hydrologic Investigation and Remediation of a Post-Remining Acidic Seep.
William W. Aljoe, Nile A. Linberg .......................................................................................................................... 296

Water Quality Improvements Resulting from FBC Ash Grouting of Buried Piles of Pyritic Materials
on a Surface Coal Mine.
Joseph Schueck, Mike Dimatteo, Barry Scheetz, Mike Silsbee................................. 308

Arthur W. Rose, Jeralee Stalker, Louise H. Michaud

Improving Groundwater Quality in the Backfill with Alkaline Additions.
Vance Patrick Wiram, Hans E. Naumann ................................................................. 336

The Use of Sediment Sampling to Evaluate the Success of Hydrologic Reclamation.
Robert G. Liddle ........................................................................................................ 355

SESSION 6: ACID MINE DRAINAGE PASSIVE TREATMENT - DRAINS

Acid Mine Drainage Treatment with Open Limestone Channels.
Paul F. Ziemkiewicz, David L. Brant, Jeffrey G. Skousen ........................................ 367

Jung-Chan Choi, Terry R. West ................................................................................. 375

Assessment of the Applicability of an Anoxic Limestone Drain for a Surface Mine in East Central Tennessee.
Terry W. Schmidt, Robert S. Hedin, P.R. Lorello ...................................................... 384

SESSION 7: SOILS AND OVERBURDEN

391
Constructing Vegetation Productivity Equations by Employing Undisturbed Soils Data: An Oliver County, North Dakota Case Study.
Jon Bryan Burley, Kenneth J. Polakowski, Gary Fowler................................................................. 393

Productivity of Prime and Nonprime Topsoil Reclaimed in Equivalent Topographic Positions.
Gary A. Halvorson, M.V. Nathan........................................................................................................... 402

A Methodology for Evaluating the Costs of Selective Handling of Overburden Materials.
T. Phipps, J. Skousen, J. Fletcher ......................................................................................................... 407

Shankar Sharmasarkar, George F. Vance, Florence Cassel-Sharmasarkar.......................................... 424

Compaction Effects on Mineland Soil Quality.
Padam P. Sharma, Fredric S. Carter ........................................................................................................ 430

Availability of P and K in Restored Prime Farmland.
O. Semalulu, R.I. Barnhisel.................................................................................................................. 442

SESSION 8: REVEGETATION ECOLOGY 451

The Potential for Using Wildflower Species to Increase Natural Habitat in Contour Surface Mine Reclamations.
John R. Heckman, Karen D. Holl, Mara Sabre, Robert B. Atkinson, John Cairns, Jr. ......................... 453

Predicting Grass Stand Adequacy from Early Stand Parameters.
R.E. Ries................................................................................................................................................. 462

Vegetation Diversity within Native and Reclaimed Coal Mine Sites: Environmental Factors and Seasonal Variability.
Brenda K. Schladweiler, George F. Vance .................................................................................................................. 472

Natural and Planted Flora of the Log Mountain Surface-Mined Demonstration Area, Bell County, Kentucky.
Ralph L. Thompson, Gary L. Wade, R. Allen Straw .................................................................................................. 484

The Relative Merits of Dolomitic and Calcitic Limestone in Detoxifying and Revegetating Acidic, Nickel- and Copper-Contaminated Soils in the Sudbury Mining and Smelting Region of Canada.
Derek McHale, Keith Winterhalder ......................................................................................................................... 504

Ontogeny of Accidental Wetlands and Hydric Soil Development in Surface Mined Landscapes.
Robert B. Atkinson, W. Lee Daniels, John Cairns, Jr. .................................................................................................. 516

SESSION 9: CONSTRUCTED WETLANDS

Acidic Mine Drainage Abatement in an Anaerobic Sub-Surface Flow Wetland Environment - Case History of the Treatment System at Corsica, PA.
Jonathan M. Dietz, Dennis M. Stidinger .................................................................................................................. 531

Chemical Characterization of Iron Oxide Precipitates from Wetlands Constructed to Treat Polluted Mine Drainage.
Caryl L. Fish, Robert S. Hedin, Jonna Partezana .................................................................................................... 541

William W. Hellier ..................................................................................................................................................... 550

Manganese and Trace Metal Removal in Successive Anaerobic and Aerobic Wetlands.
F.J. Sikora, L.L. Behrends, G.A. Brodie, M.J. Bulls ................................................................................................. 560
The Use of Overland Flow Wetland Treatment Systems to Remove Nickel from Neutral Mine Drainage. Paul Eger, Jon Wagner, Glenn Melchert ................................................................. 580

SESSION 10: MINED LAND REFORESTATION 599

The Use of Leguminous Trees in Reclamation of Tropical Mined Soils. Luiz E. Dias, Avílio A. Franco, Eduardo F.C. Campello, Sérgio M. de Faria......................................................... 601

Tree Shelter and Interplanted N-Fixing Shrub Effects on Crop Tree Growth on a Calcareous Minesoil. David A. Kost, Merlyn M. Larson, John P. Vimmerstedt ........................................................................ 621

Evaluation of Natural Succession on Reclaimed Coal Mine Land in Western Kentucky. Dan L. Williamson, R. Brent Gray ........................................................................................................ 629

SESSION 11: GEOCHEMISTRY OF ACID MINE DRAINAGE 647

SESSION 13: LANDSCAPE REHABILITATION

Applying Geomorphologic Principles to Restore Streams Impacted by Surface Mining.
Michael S. Ellison ................................................................................................................................ 751

Reinterpreting SMCRA: “Permitting” Phased Postmining Land Use.
Zina R. Merkin, Thomas J. Nieman ..................................................................................................... 766

The Prospect of Gully Gravure on Reclaimed Hillslopes.
Terrence J. Toy, W.R. Osterkamp ................................................................................................. 781

POSTER PAPERS AND ABSTRACTS:

SOIL AND OVERBURDEN TECHNICAL DIVISION

Jon Bryan Burley .................................................................................................................................. 789

Crop and Soil Responses to Sewage Sludge Applied to Reclaimed Prime Farmland.
Q. Zhai, R.I. Barnhisel ........................................................................................................................ 813

Acid Mine Drainage and Minesite Salinity in Australia.
David J. Williams .................................................................................................................................. 821
Organic Matter and Nutrient Accumulation in Reclaimed Kaolin Mine Soils of Georgia.

Plant Materials and Amendments for Controlling Wind and Water Erosion on a Fly Ash Disposal Area: TVA Colbert Fossil Plant, Alabama.
Jimmy J. Maddox, David Behel, John M. Soileau, Jimmie Kelsoe ..................................................... 822

Reclamation of Acidic, Denuded Copper Basin Land: Revegetation Performance of Phosphate Rock vs. Other Nutrient Sources.
J.M. Soileau, F.J. Sikora, J.J. Maddox, J.J. Kelsoe ............................................................................ 823

Improved Methods for Acid Base Accounting Utilizing Geospatial Modeling.
Michael DiMatteo, Mark Gaylord ........................................................................................................ 824

FORESTRY AND WILDLIFE TECHNICAL DIVISION

Age and Site-Related Patterns of Carbon Allocation to Wood, Foliage, and Roots on Reclaimed Kaolin Mines in Georgia.
A. Legerski, R. Hendrick, E. Ogden .................................................................................................... 825

Mycorrhizal Fungi + Trees--Practical Beneficial Tools for Mineland Reclamation.
C.E. Cordell, D.H. Marx, B. Jenkins .................................................................................................... 825

GEOTECHNICAL ENGINEERING TECHNICAL DIVISION

Comparative Assessment of Groundwater Chemistry Evolution at Three Abandoned Mines and Its Practical Implications.
Jaroslav Šolc ......................................................................................................................................... 826

Injection of Alkaline Ashes into Underground Coal Mines for Acid Mine Drainage Abatement.
