Proceedings

15th Annual National Meeting of the American Society for Surface Mining and Reclamation

Mining--Gateway to the Future!
1998 15th National ASSMR Meeting
Arrangements Committee

Program Chair
John S. Mead, Director
Coal Research Center
Southern Illinois University at Carbondale
Carbondale, IL 62901-4623
Phone: (618) 536-5521
FAX: (618) 453-7346
E-mail: jmead@siu.edu

Technical Director
Jack Nawrot
Cooperative Wildlife Research Laboratory
Southern Illinois University at Carbondale
Carbondale, IL 62901-6504
Phone: (618) 453-6945
FAX: (618) 453-6944
E-mail: jnawrot@siu.edu

Local Arrangements
Dianne Throgmorton
Coal Research Center
Southern Illinois University at Carbondale
Carbondale, IL 62901-4623
Phone: (618) 536-5521
FAX: (618) 453-7346
E-mail: diannet@siu.edu

Registration and Facilities
Ken Robinson
Division of Continuing Education
Southern Illinois University at Carbondale
Carbondale, IL 62901-6705
Phone: (618) 536-7751
FAX: (618) 453-5680
E-mail: kenr@siu.edu

Planning and Program Committee Members
Dean Spindler
Illinois Department of Natural Resources
Office of Mines and Minerals

Mike Sponsler
Indiana Department of Natural Resources
Division of Land Reclamation

Douglas Downing
Arch Reclamation Services, Inc.
Arch Minerals

Clay Kolar
Illinois Department of Natural Resources
Office of Mines and Minerals

Gene Smout
Consolidation Coal Company

Charles Hooks
Cooperative Reclamation Research Station

William L. Joseph
Office of Surface Mining

Kim Vories
Office of Surface Mining

Joe Galetovic
Office of Surface Mining

Steve Aaron
Arch of Illinois

Brian Wilm
Illinois Department of Natural Resources
Illinois Natural History Survey

ASSMR Executive Secretary
William T. Plass
ASSMR
21 Grandview Drive
Princeton, WV 24740
(304) 425-8332
Proceedings

15th Annual National Meeting of the American Society for Surface Mining and Reclamation

Mining--Gateway to the Future!

Co-editors:
Dianne Throgmorton
Jack Naurot
John Mead
Joe Galetovic
William Joseph

Published by
The American Society for Surface Mining and Reclamation
(made possible by the generous support of the U.S. Department of Interior, Office of Surface Mining)
Twenty-five years ago, a small group met at the West Virginia Division of Reclamation in Charleston, West Virginia to discuss forming an organization to serve as a forum to discuss mined land reclamation research and practices. The West Virginia Steering Committee had reviewed current and proposed reclamation research that had attracted regional interest. At the same time, the public outcry regarding the environmental impact of surface mining was gaining momentum. The consensus was that should an organization representing a broad spectrum of interests be formed, it would have regional support. In 1973, five state regulatory agencies, four universities, five federal agencies, two industries, several industry-funded reclamation associations, the Appalachian Regional Commission, and the Interstate Mining Compact Commission met to form the Council for Surface Mining and Reclamation in Appalachia.

Between the spring of 1973 and the fall of 1978, the Council met semiannually at locations within the Appalachian region. The meetings consisted of well-planned technical sessions featuring prominent mined land reclamation specialists. The number of participants increased each year, and it became clear that the Council was providing an important service.

The geographical area served was extended to the 100th meridian in 1978 in response to the interest displayed by reclamationists from the Midwestern states. The name was changed to the American Council for Reclamation Research. Semiannual meetings continued at locations within the coalfields of the eastern United States. In addition to the technical sessions, field trips were organized to review reclamation practices. The National Coal Association and Bituminous Coal Research Inc. recognized the importance of the Council by issuing an invitation to contribute to their Research and Applied Technology Symposia on Mined Land Reclamation.

The number of mined land reclamationists from the western states participating in Council meetings increased as national recognition was gained. The decision was made in 1982 to become a national professional organization, and the name American Society for Surface Mining and Reclamation was adopted. The Society cooperated with Bituminous Coal Research Inc. in 1983 to publish the Glossary of Surface Mining and Reclamation Technology. A decision was made in 1984 to hold annual meetings and to rotate meeting locations between the eastern and western states. The first meeting was held in Owensboro, Kentucky in 1984 and proceedings of the meeting were published.

The next seven years were devoted to expanding services to the membership and developing programs to enhance information exchange nationally and internationally. An awards program was initiated to recognize individuals who had made outstanding contributions to reclamation technology. Student chapters were authorized at the University of Wisconsin-Platteville and Montana State University. Technical divisions were formed to provide members with specific professional interests to meet and discuss topics of mutual interest. The Canadian Land Reclamation Association in 1988 invited the Society to cooperate in publishing their reclamation newsletter. The Canadians hosted a joint meeting with the Society in Calgary, Alberta in 1989.

International interest and representation at national meetings of the Society encouraged consideration of an international mined land reclamation organization. The response from potential members was favorable. The International Affiliation of Land Reclamationists was formed in 1991. The Canadian Land Reclamation Association, the American Society for Surface Mining and Reclamation, the British reclamation group REGRO, and the Minerals Council of Australia formed this organization to promote international information exchange relating to mined land reclamation.

The small regional organization formed 25 years ago has grown into an internationally recognized professional society through the efforts of many dedicated individuals. The fundamental policy to encourage efforts to protect, reestablish or enhance the surface resources of land disturbances associated with mineral extraction has not changed. However, the Society now is interested in other land disturbances as reclamation practices are not determined by the cause of the disturbance. The challenges for the future are to continue to provide relevant services to the membership as the complexity and diversity of reclamation technology increases and to utilize developing technology to expand information transfer nationally and internationally.

## Contents

### Session No.  Page No.

1. **Minerals Education**
   1. Mineral Education: Bringing Today's Mining into the Classroom; Carol Sheppard, National Mining Association .......................................................... 2
   2. Mining, Minerals, and Reclamation Education; Dean Spindler, Illinois Department of Natural Resources .......................................................... 3
   3. Education with a Purpose; Nelson Fugate, Mineral Information Institute ......................................................... 6
   5. Earth Day—Taking Minerals Education to the Mine; Carolyn Bert, Arch of Illinois; with Steve Aaron ......................................................... 8
   6. Nevada's Mineral Education Program; Bill Durbin, Nevada Division of Minerals ......................................................... 9

2. **Hydrology—Characterization and Monitoring**
   1. A Quarter Century of Coal Mining and Hydrogeologic Research in Southeastern Montana; John Wheaton, Montana Tech of the University of Montana; with W. Van Voast ......................................................... 11
   2. Water Quality Analysis of Highly Acidic Watershed in Southeast Ohio; Ryan J. Eberhart, Ohio University; with K.B. Edwards, B.J. Stuart ......................................................... 22
   3. Hydraulic Properties of Surface Mine Spoils of the Northern Appalachian Plateau; Jay W. Hawkins, Office of Surface Mining Reclamation and Enforcement ......................................................... 32
   4. Recharge and Discharge Calculations to Characterize the Groundwater Hydrological Balance; Robert G. Liddle, Office of Surface Mining ......................................................... 41
   5. A Review of Methods for Optimizing Surface and Groundwater Monitoring Programs at Mine Sites; Anne Lewis-Russ, Rust Environment and Infrastructure ......................................................... 46
   6. Methods to Differentiate Between Groundwater Solute Sources; Andy Davis, Geomega; with J. Anderson, C. Byrns ......................................................... 54
   7. Using Tracers to Understand the Hydrology of an Abandoned Underground Coal Mine; Geoffrey A. Canty, University of Oklahoma; with J.W. Everett ......................................................... 62
   8. Hydrologic Modeling of Reclaimed Strip Mine Spoil; Kenneth Edwards, Ohio University; with M.W. Stoertz, D. Turner ......................................................... 73

3. **Tailings—Reclamation**
   1. Using Soil Island Plantings as Dispersal Vectors in Large Area Copper Tailings Reclamation; George Scherer, USDA-Forage Science Lab; with R. Everett ......................................................... 78
   2. Reclamation of Acidic Copper Mine Tailings using Municipal Biosolids; Mark Rogers, ASARCO, Inc.; with S.A. Bensom, T.L. Thompson ......................................................... 85
   3. Native Plant Restoration of Biosolids Amended Copper Mine Tailings; Paul Kramer, University of Washington; with P. Zabowski, R.L. Everett, G. Sherer ......................................................... 92
   4. Techniques for Establishing Aquatic Vegetation in Permanently Flooded Tailings—A Field Test; Peter J. Beckett, Laurentian University; with S. Pappin-Willanen, G.M. Courtin ......................................................... 101
   5. Upland and Wetland Vegetation Establishment on Reclaimed Coal Shurry (Missouri Case History); V.A. Skel, Southern Illinois University Cooperative Wildlife Research Laboratory; with J. Nawrot ......................................................... 102
   6. Indian Creek—AML: Coal Slurry Reclamation (Kansas Case History); Steve Withar, Black and Veatch ......................................................... 103
   7. Plant Selection for Dewatering and Reclamation of Tailings; D.G. Sego, University of Alberta; with M.J. Silva, M.A. Naaseth, K.W. Biggar, P.S. Charasayk ......................................................... 104
   8. Practical Demonstration of Slow Leakage from a Tailings Impoundment; George Fenemore, Geomega; with A. Davis, C. Byrns ......................................................... 118

4. **Reforestation**
   1. Thirteen-Year Hardwood Tree Performance on a Midwest Surface Mine; William G. Ashby, Southern Illinois University; with C.A. Kolar ......................................................... 124
2. Topsoil, Ripping, and Herbicides Influence Tree Survival and Growth on Coal Minesoil After Nine Years; David Kost, The Ohio State University and Ohio Agricultural Research and Development Center; with J.H. Brown, J.P. Vmitterstedt .................................................. 134
4. Successful Tree Planting Techniques for Drastically Disturbed Lands: A Case Study of the Propagation and Planting of Container-Grown Oak and Nut Trees in Missouri; Stuart Miller, Missouri Department of Natural Resources .................................................. 151
8. Forested Wetland Restoration and "Nuisance" Plant Species Management on Phosphate Mined Lands in Florida; Steven G. Richardson, Florida Institute of Phosphate Research; with G.D. Johnson .................................................. 164

5A. **Mine Drainage– Biogeochemical Processes**

1. Historical Overview and Future Directions of the Microbial Role in the Acidic Coal Mine Drainage System; Eleanor Robbins, U.S. Geological Survey .................................................. 174
2. Processes Contributing to the Removal of Manganese from Mine Drainage by an Algal Mixture; Thomas Wildeman, Colorado School of Mines; with L.D. Clayton .................................................. 192
3. Studies Leading to the Design and Construction of the Passive Treatment System at the West Fork Mine, Missouri; Thomas Wildeman, Colorado School of Mines; with J. Gusek, A. Miller, J. Fricke .................................................. 202
4. The Challenges of Designing, Permitting, and Building a 1,200 GPM Passive Bioreactor for Metal Mine Drainage, West Fork Mine, Missouri; James Gusek, Knight Piesold LLC; with T. Wildeman, A. Miller, J. Fricke .................................................. 203

5B. **Mine Drainage–Treatment, General**

1. Geochemistry of Laboratory Anoxic Limestone Drains; Patrick Sterner, West Virginia University; with J. Skousen, J. Donovan .................................................. 214
2. Design Considerations and Construction Techniques for Successful Alkalinity Producing Systems; George A. Skovran, U.S.D.A. Natural Resources Conservation Service; with C.R. Clouser .................................................. 235
3. The Effectiveness of Acid Rock Drainage Control Strategies at the Summitville Mine; Victor Ketellapper, U.S. Environmental Protection Agency; with J.W. Christiansen .................................................. 243
4. Purification and Treatment of Mine Drainage in Some Mine Areas of China; Hong Yu, Xiangtan Mining Institute .................................................. 253
5. Denize Sludge Process for Reducing AMD Sludge Disposal; Michael Leon, Chester Engineers; with R.L. Zick, D.C. Finn .................................................. 257

5C. **Mine Drainage–Passive Treatment, Wetlands**

1. Mine Closure—Can Passive Treatment Be Successful?; Paul Eger, Minnesota Department of Natural Resources; with G. Melchert, J. Wagner .................................................. 263
2. Retention of Manganese by a Constructed Wetland Treating Drainage from a Coal Ash Disposal Site; Kenneth Kerrick, University of Pittsburgh at Johnstown; with M. Horner .................................................. 272
3. Prediction of $\text{Fe}^{2+}$ Concentrations Using Laboratory Rate Laws in Wetlands Constructed for Acid Mine Drainage Treatment; Carl S. Kirby, Bucknell University; with H.M. Thomas, G. Southam, R. Donald .................................................. 280
5. Comparison of Color, Chemical, and Mineralogical Composition of Mine Drainage Sediments to Pigment; Carl S. Kirby, Bucknell University .................................................. 281

5D. **Mine Drainage–Prediction and Monitoring**

1. Hydrologic Conditions in the Coal Mining District of Indiana and Implications for Reclamation of Abandoned Mine Lands; Greg Olyphant, Indiana University; with D. Harper .................................................. 283
2. Geophysical Investigations of Near-Surface Materials and Groundwater Quality at Abandoned Mine Land Site No. 1087, Pike County, Indiana; Kevin Spindler, Indiana University; with G.A. Olyphant, D. Harper .................................................. 289
3. Phycoremediation Ecology of Acid Mine Drainage in the Piedmont of Virginia; Rama Krishnaswamy, George Washington University; with R.A. Hanger .................................................. 299
4. Predicting Life-of-Mine Tailings Discharge Water Quality; Andy Davis, Geomega; with A. Tiidal, C. Byrns .................................................. 309
5. A Method to Predict Evolving Post-Closure Pit Lake Chemistry; Andy Davis, Geomega; with G. Fennemore .................................................. 315
6. Acid Soils–Reclamation Practices

1. Influence of Liming and Topsoil Thickness on Vegetative Growth and Leachate Quality of Acidic Coal Refuse; W. Lee Daniels, Virginia Tech; with R-S Li, B. Stewart .................................................. 323
2. Lime Treatment Experiments on Revegetation in Illinois—a Twenty-Five Year Record; Charles Medvic, Illinois Department of Natural Resources ................................................. 338
3. pH Control in Acidic-Metalliferous Mine Waste for Site Revegetation; Douglas Dollhopf, Montana State University .............................................................................................. 356
5. Acidic Minespoil Reclamation with Alkaline Biosolids; Cindy Drill, NVIRO International; with B.J. Lindsay, T.J. Logan .......................................................................................... 367
6. Design of Field Test Plots for a Sloped Waste Rock Surface; Mike O’Kane, O’Kane Consultants Inc.; with J. Stoicescu, S. Januszewski, D.M. Mchiana, M.D. Haug ........................................................................ 368
7. Use of Alternatives Analysis to Determine the Reclamation Approach for Heap Leach Pads; Roy R. Cellan, Resource Concepts, Inc................................................................. 379
8. The Relationship Between Waste Rock Geochemistry, Age and Reactivity; Steve Helgen, Geomega; with A. Davis, G. Byrns .................................................................................... 383
9. Bunker Hill Superfund Site: Ecological Restoration Program; Sally Brown, University of Washington; with Chuck Henry, R. Chaney, H. Compton .............................................. 388

7. Wildlife and Fisheries Habitat

1. The Whiteside Run Restoration Project: Wetlands and Stream Mitigation and Restoration of a Previously Polluted Stream; Alan Bigatel, Pennsylvania Department of Environmental Protection; with W.W. Helier, J.C. Foreman, S. Kepler ................................................................. 395
2. Effect of Stocking Density on Extensive Production of Freshwater Shrimp in Coal Mine Reclamation Ponds; James Titlow, Kentucky State University; with B. Grey, J. McGuire, S.D. Coyle, F. Wynne ........................................................................................................ 406
3. Assessing the Effect of Mine Subsidence on an Internationally Important Wetland Site; R.N. Humphries, Humphries Rowell Associates Ltd. ................................................................. 409
4. A Baffle Facility in a Sand/Gravel Quarry and a Question of Wetland Jurisdiction; Georganna Collins, Landscape Architect .......................................................................................... 418
5. Comparison of Bird Communities in Southwestern Montana After Fourteen Years of Natural Recovery from Smelter Impacts; John Baldwin, Hayden-Wing Associates; with L.D. Hayden-Wing, J.B. Winstead ....................................................................................................... 419
6. Wild Ungulate use of Areas in Southwestern Montana After Fourteen Years of Natural Recovery from Smelter Impacts; Larry Hayden-Wing, Hayden-Wing Associates; with J.R. Baldwin, J.B. Winstead ........................................................................................................ 428
7. Habitat Use and Food Habits of Snowshoe Hares Association with a Reclaimed Strip Mine in Interior Alaska; Charles L. Elliott, Eastern Kentucky University ......................................... 440

8. Subsidence–Engineering Practices and Environmental Effects

1. Assessing the Effect of Mine Subsidence on Dwarf Shrub Ericoid Heath Communities Within a Site of National Importance; R. Neil Humphries, Humphries Rowell Associates Ltd.; with H. Wessman, P.R. Benyon, S.W. Peace ........................................................................................................ 446
2. Environmental Damage and Countermeasures in China Coal Mine Areas; Bingman Hu, Southern Illinois University ................................................................................................. 447
3. Identification of Underground Mine Workings with the Use of Global Positioning System Technology; Geoffrey A. Ganty, University of Oklahoma; with M. Sharp, J.W. Everett ........................................................................................................ 453
4. The Effect of Sofftening on the Bearing Capacity of Mine Floors; Gennaro Marino, Marino Engineering Associates, Inc.; with S-H Choi ........................................................................ 459
5. Lifting and Protecting Residential Structures from Subsidence Damage Using Airbags; Theodore L Triplett, The University of Tennessee Knoxville; with R. Bennett ......................................................................................... 483
6. Subsidence Resistant Repair of a Block Basement; Gennaro G. Marino, Marino Engineering Associates, Inc.; with J.W. Mahar, E. Murphy, J. Farnetti ........................................................................ 484
9. **OSM Acid Forming Materials Mini Workshops**
   An overview of OSM’s Technical Training Program (TTP and TIPS), Technical Transfer Programs (EP and GIS), a historical look at Technical Development (Applied Research and TIPS), and the need for future development (results of the CCB, Prime Farmland, and other OSM sponsored forums).
   
   **Instructor/Agency:**
   Joe Galetovic and William Joseph
   Office of Surface Mining ........................................... 494

10. **RUSLE–Erosion Prediction Techniques on Mined Construction and Reclaimed Lands**
   An overview of new erosion prediction techniques and supporting software developed through an OSM Technology Transfer Program (two consecutive presentations).
   
   **Instructor/Agency:**
   Terry Toy
   University of Denver
   George Foster
   USDA Agricultural Research Service ............................... 495

11. **IDNR Wetlands Technology Transfer Program**
   Workshop highlighting the IDNR-INHS "Illinois Wetlands Restoration and Creation Guide."
   
   **Instructor/Agency:**
   Brian Wilm
   Illinois Department of Natural Resources ........................ 496

12. **Mine Planning and Postmining Land Use**

    1. Total Resources Management in Mine Planning; Alan K. Kuhn, AK GeoConsult, Inc. .......... 498
    2. Virtual Modeling for Environmental Decision Support; Joze Kornik, University of Ljubljana; with M. Kvaric ........................................... 504
    4. Reclamation Challenges at Usibelli Coal Mine in Healy, Alaska; Larry P. Jackson, Usibelli Coal Mine, Inc. ...................................... 521
    5. Rational Selection of Post-Mining Land Use; Alan Kuhn, AK GeoConsult, Inc. ................. 522
    6. Remaining to Reclaim Abandoned Mine Lands: Virginia's Initiative; Carl E. Zipper, Virginia Polytechnic Institute and State University; with B. Lambert .................. 530

13A. **Vegetation Establishment– Principles and Practices**

    1. Working with Nature: A Review of 25 Years of Successful Land Reclamation in Wales;
       I. G. Richards, Richards Moorehead and Laing LTD .......... 540
    3. Pre- and Postmine Diversity Revisited; Robyn Tierney, New Mexico Mining and Minerals Division; with G.L. Wade ........................................... 564
    5. Technology Transfer for the Revegetation of Phytotoxic, Smecker-Denuded Soils–The Potential Use of Minimal Amelioration and Reciprocal Transplantation of Metal-Tolerant Grasses at Pin Flon, Manitoba; Keith Winterhalder, Laurentian University ........................................... 579
    6. Abundance and Distribution of Lichens Found in the Reclaimed Areas of the Nickel and Copper Mining Region of Sudbury, Ontario; Peter J. Beckett, Laurentian University; with S. Wainio ................................. 580
    7. Organic Soil Amendments and Fiber Wattles for Enhanced Revegetation and Erosion Control; Stanley M. Miller, University of Idaho; with J. Steinhacher, P. McRae ........................................... 581
9. Reclamation Research for Various Land Uses in the Oil Sands Region of Alberta, Canada; Terry M. Macyk, Alberta Research Council; with M.Y.P. Fung, R.W. Pauls

10. Stabilizing Shorelines with Coir Fiber; Janet Kostielney, BonTerra America, Inc.; with D. Knezick

13B. Vegetation Establishment—Warm Season Grasses
1. Establishment of Warm-Season Native Grasses and Forbs on Drastically Disturbed Lands; Stuart Miller, Missouri Department of Natural Resources
2. Establishing Native Warm Season Grasses on Eastern Kentucky Strip Mines; Thomas G. Barnes, University of Kentucky; with J.L. Larkin, M.B. Arnett
3. Converting Tall Fescue Fields to Native Warm Season Grasses in Kentucky; B. E. Washburn, University of Kentucky; with T.G. Barnes
4. Warm Season Grass Establishment (In One Year Without the Weeds); Doug Downing, Arch Reclamation Services, Inc.

14A. Coal Combustion By-Products—General
2. Coal Combustion Ash Haulback for Mine Reclamation; Richard E. Gray, GAI Consultants, Inc.; with T.A. Gray
4. A Field Demonstration of the Coal Combustion By-Products Based Paste Backfill for Subsidence Control in Illinois; Yoginder P. Chugh, Southern Illinois University; with D. Dutta, S. Renninger

14B. Coal Combustion By-Products—Mine Drainage Treatment
1. The Western Maryland Coal Combustion By-Products/Acid Mine Drainage Initiative—The Winding Ridge Demonstration Project; Leonard G. Rafalko, Environmental Resources Management; with P. Petzrick
2. Injection of Coal Combustion By-Products into the Omega Mine for the Reduction of Acid Mine Drainage; Thomas A. Gray, GAI Consultants, Inc.; with T.C. Moran, D.W. Broschart, G.A. Smith
3. An Injection Technique for In Situ Remediation of Abandoned Underground Coal Mines; Geoffrey A. Canty, University of Oklahoma; with J.W. Everett
4. Utilization of Wet FGD Material for AMD Abatement in Underground Coal Mines; Jim Ashby, Mettiki Coal Corporation
5. Injection of FGD Grout to Abate Acid Mine Drainage in Underground Coal Mines; Shaw Mah, American Electric Power; with M.T. Darnian, R. Baker
6. Passive Treatment of Acid Mine Drainage Using Coal Combustion By-Products and Spent Mushroom Substrate: Results of a Column Study; Terri Crisp, University of Oklahoma; with R.W. Nairn, K.A. Strevert, J. Everett
7. Metal Release from Fly Ash upon Leaching with Sulfuric Acid or Acid Mine Drainage; Jeff Skousen, West Virginia University; with D.K. Bhumbla
8. Vegetation Establishment on Soil-Amended Weathered Fly Ash; R. L. Barnhisel, University of Kentucky; with O. Semalulu, S. Witt

15. Prime Farmland Reclamation and Mine Soils Management
1. Illinois Reclaimed Soil Productivity: Restoration Techniques; Gene Smout, Consolidation Coal Company
2. Mine Soil Classification and Mapping; Robert Darmody, University of Illinois at Urbana-Champaign
3. Soils-Based Productivity Evaluation; Charles Hooks, Southern Illinois University
4. Land Use and Value After Reclamation; William Phelps, ARK Land Company
5. Small Mines and Future Techniques; Mark Yingling, Black Beauty Coal Company
Poster Presentations

1. Effects of Arbuscular Mycorrhizae on Water Stress Tolerance of Big Sagebrush Seedlings; Gerald Schuman, USDA High Plains Grassland Research Station; with P.D. Stahl, S.E. Williams, S.M. Frost .......................................................... 740

2. Impacts from Surface Mining on Ground-Water System: A Twenty-Year Record; Kitchakarn Promma, Texas A&M University; with C.C. Mathewson .......................................................... 741

5. Recovery and Enhancement Plan Development for the Leading Creek Watershed, Meigs County, Ohio; Rebecca J. Currie, Virginia Polytechnic Institute and State University; with D.S. Cherry, H.A. Latimer, J.H. Van Hassel, J.E. Babendreier .......................................................... 744

7. Post-Mining Predictive Visual Quality Assessment in Two Michigan Surface Mines; Jon Bryan Burley, Michigan State University; with P.S. Keefe .......................................................... 752

8. Evaluating Mine Reclamation Habitats at the Landscape Level Following Mountain-Top Removal; Stacy N. Edmonds, Miami University .......................................................... 761

10. Inhibition of Acid Production in Coal Refuse Amended with CaSO₄-Based Flue Gas Desulfurization By-Product; Warren Dick, The Ohio State University; with Y.L. Hao, J. Beeghly .......................................................... 770

12. Minesite Development in Central West Virginia; W.J. Noll, West Virginia University; with J.C. Sencindiver .......................................................... 772

13. Restoration of Leafy Spurge Infested Rangeland in North Dakota; Ron E. Ries, USDA Agricultural Research Service; with J.F. Karni .......................................................... 773

14. Recomposing Mixed Lands: Landscape as Arena for Education; Susan Wessman, Landscape Architect .......................................................... 774

15. The Whiteside Run Restoration Project: Wetlands and Stream Mitigation and Restoration of a Previously Polluted Stream; William W. Hellier, Pennsylvania Bureau of Mining and Reclamation; with A. Bigatel, J.G. Foreman, S. Kepler .......................................................... 775

16. Application of Geologic Modeling to Overburden Characterization and Special Handling at a Texas Lignite Mine; Paul T. Behun, Jr., USD1 Office of Surface Mining; with William L. Joseph .......................................................... 776

17. Establishing Wetland Vegetation in Alkaline Mine Tailings; J.A. Freeland, Northern Ecological Services; with P.J. Robinson, C.L. Wolverton .......................................................... 777
